Since HewlettPackard s acquisition of Compaq, the product has been marketed by HP. The devices use a Windows Mobile interface. In addition to this, there are several Linux distributions that will also operate on some of these devices. Later versions of iPAQs have most of these features integrated into the base device itself, some including GPRS mobiletelephony simcard slot and radio.A substantial number of current and past devices are outsourced from Taiwanese HTC corporation.<http://agpaslauga.lt/userfiles/example-manual-unit-test-cases.xml>

With the acquisition of Compaq by HewlettPackard, HP discontinued the Jornada line of Microsoft Windows powered Pocket PCs, moving development and marketing of Pocket PCs to the iPAQ line. It had a fourbit grayscale display, running on Pocket PC 2000. The H3100 was succeeded by the similarlydesigned H3600. Changes included a colour display and a chrome coloured directional pad compared to the monochrome display and gunmetal grey dpad of its predecessor. The H3600 was succeeded by the H3800 and H3900, which retained the same form factor, but had a different button layout.They were sold preinstalled with the Windows Mobile for Pocket PC 2003 Operating System. The h63xx series of iPAQs running the Phone Edition of Windows Mobile 2003, the hx47xx series and the rz17xx series, both running the Second Edition of Windows Mobile 2003 were introduced in August 2004.These devices were aimed at consumers, rather than the traditional corporate audience. Emphasis was placed on media features, like NEVO TV Remote and Mobile Media. They ran on Windows Mobile 2003SE.It was replaced a year later by the hw6900 series, running on Windows Mobile 5. Both series of iPAQs work on the Windows Mobile 5 Operating System WM5, as do the hx2000 and hw6900 series. The first HP Windows Mobile 6 device, the iPAQ 500 Series Voice Messenger, with the Windows Mobile 6 Standard Operating System WM6, and numeric pad, was released in the same year.The models announced were the 100 Series Classic Handheld, the 200 Series Enterprise Handheld, the 300 Series Travel Companion, the 600 Series Business Navigator and the 900 Series Business Messenger. The 100 and 200 Series are regular touchscreen PDAs without phone functionality running WM6. The 300 Series Travel Companion is not a PDA; marketed as a Personal Navigation Device, it is a handheld GPS unit operating on the Windows CE 5.0 core Operating System with a custom user interface.<http://rigdrilling.org/userfiles/example-manual.xml>

User's Guide

HP iPAQ Pocket PC h6300 Series

Document Part Number: 353283-001

February 2004

Revised: 11/26/03

The 600 and 900 series are phones with integrated GPS and 3G capabilities, running the WM6 Professional. The 600 series possesses a numeric pad and the 900 series features a full QWERTY keyboard. HP continues to advertise the 111 series and the Glisten on its website, however. As such, the status and fate of the iPAQ line is unclear. It stopped being actively maintained in 2007. Support for handwriting recognition, onscreen keyboard, bluetooth, IrDA and add-on hardware such as keyboards are standard in both environments. Upgrades could be purchased from HP. Windows Mobile 2003 could be installed on the H3950, H3970, h5450 and possibly other models of the H3xxx series with sufficient ROM capacity. These include Windows Mobile 6.0, 6.1 and 6.5. Compaq presumably upgraded the battery to cope with the faster CPUs power requirements. Retrieved February 13, 2013. Retrieved 13 February 2013.
